

# VACCINE ACCESS TEST

## Global Score Summary

The world is racing to find safe and effective vaccines against COVID-19. And when we do, these vaccines must be made available to everyone who needs them most, regardless of nationality or wealth. Because a fair global distribution of COVID-19 vaccines will end the pandemic faster for everyone, saving lives and helping economies recover. So we want to know: do world leaders' actions move us closer to, or further from, an equitable outcome? ONE's Vaccine Access Test provides a framework to answer this question based on the following metrics:

- **Access to COVID-19 Tools Accelerator (ACT-A):** Providing financial support to the ACT-A, the only mechanism that is positioned to deliver a coordinated global response, at scale and at speed.
- **Multilateral Leadership:** Working with other countries, companies, and institutions to advance equity.
- **Policies:** Instituting and promoting policies to ensure COVID-19 vaccines are accessible to all on a global scale.
- **Deals:** Every deal to secure promising COVID-19 vaccine candidates is scored individually based on a set of metrics for how well it advances equity. If a company or country has completed a deal, their average deal score has been added to their final score.

To date, we have scored G20 countries plus the EU and AU, and the companies striking deals for promising vaccine candidates. Here's how they stack up:

⊗ Impeding Equity		↗ Room for Improvement	✔ Advancing Equity
Argentina	Moderna	European Commission	
Australia	GlaxoSmithKline	France	
Brazil	Novavax	Germany	
Canada	Pfizer	Italy	
China	BioNTech	Saudi Arabia	
India	Sanofi	U.K.	
Indonesia		AstraZeneca	
Japan		Johnson & Johnson	
Korea			
Mexico			
Netherlands			
Russia			
South Africa			
Turkey			
U.S.			

Each score is influenced by multiple factors, but commonalities exist across actors in each category:

- Those who are **impeding equity** are going it alone, failing to work across borders and to share information.
- Those with **room for improvement** are taking some welcome actions collectively to speed the delivery of vaccines globally, but lack consistency on equity across policies and deals.
- While no one has reached the pinnacle of **advancing equity**, this can and must change as more actions are taken. ONE will release updated scores the first week of every month to see who is rising to the challenge to end the pandemic.

The Vaccine Access Test is intended to start conversations and even debates around how to end this pandemic, and lead to concrete actions that move us collectively in the right direction. Because none of us is safe until all of us are safe. **Follow along at [ONE.ORG/VaccineAccessTest](https://ONE.ORG/VaccineAccessTest).**
